

Amendments to the Abstract:

An electrophotographic apparatus ~~comprises~~includes a plurality of image forming devices, ~~overlapped one another.~~ The wherein each image forming device ~~comprises~~includes a developing device ~~comprising~~having a tip end part and a toner storage part coupled to the tip end part. A thickness of the tip end part ~~in an overlapped direction~~ is smaller than a thickness of the toner storage part. An exposure device, which is an LED array, is arranged in a location, in which near the tip end part is small in thickness. ~~A toner regulatory blade extends in a direction along a normal to the overlapped direction and arranged so as to come into contact with a developing roller from a direction following rotation of the developing roller.~~
